

Risk Factors

Operational and other risks faced by Toyota that could significantly influence the decisions of investors are set out below. However, the following does not encompass all risks related to the operations of Toyota. There are risk factors other than those given below. Any such risk factors could influence the decisions of investors.

Industry and Business Risks

The worldwide automobile market is highly competitive.

The worldwide automotive market is highly competitive. Toyota faces strong competition from automobile manufacturers in the respective markets in which it operates. Competition is likely to further intensify in light of continuing globalization and consolidation in the worldwide automotive industry. Factors affecting competition include product quality and features, innovation and development time, pricing, reliability, safety, fuel economy, customer service and financing terms. Increased competition may lead to lower vehicle unit sales and increased inventory, which may result in a further downward price pressure and adversely affect Toyota's financial conditions and results of operations. Toyota's ability to maintain its competitiveness will be fundamental to its future success in existing and new markets and its market share. There can be no assurances that Toyota will be able to compete successfully in the future.

The worldwide automobile industry is highly volatile.

The markets in which Toyota competes have been subject to considerable volatility in demand in each market. Demand for automobile sales depends to a large extent on general, social, political and economic conditions in a given market and the introduction of new vehicles and technologies. As Toyota's revenues are derived from sales in markets worldwide such as Japan, North America and Europe, economic conditions in these countries and regions are particularly important to Toyota. Demand may also be affected by factors directly impacting automobile price or the cost of purchasing and operating automobiles such as sales and financing incentives, prices of raw materials and parts and components, cost of fuel and governmental regulations (including tariffs, import regulation and other taxes). Volatility in demand may lead to lower vehicle unit sales and increased inventory, which may result in a further downward price pressure and adversely affect Toyota's financial conditions and results of operations.

Toyota's future success depends on its ability to offer innovative new, price competitive products that meet and satisfy customer demand on a timely basis.

Meeting and satisfying customer demand with attractive new vehicles and reducing product development times are critical elements to the success of automobile manufacturers. The timely introduction of new vehicle models, at competitive prices, meeting rapidly changing customer preferences and demands is fundamental to Toyota's success. There is no assurance that Toyota may adequately perceive and identify changing customer preferences and demands with respect to quality, styling, reliability, safety and other features in a timely manner. Even if Toyota succeeds in perceiving and identifying customer preferences and demands, there is no assurance that Toyota will be capable of developing and manufacturing new, price competitive products in a timely manner with its available technology, intellectual property, sources of raw materials and parts and components (including the procurement thereof), production capacity and other factors affecting its productivity. Further, there is no assurance that Toyota will be able to implement capital expenditures at the level and times planned by management. Toyota's inability to develop and offer products that meet customer demand in a timely manner can result in a lower market share and reduced sales volumes and margins, and may adversely affect Toyota's financial conditions and results of operations.

Toyota's ability to market and distribute effectively, and Toyota's maintenance of brand image, are integral parts of Toyota's successful sales.

Toyota's success in the sale of automobiles depends on its ability to market and distribute effectively based on distribution networks and sales techniques catered to its customers as well as its ability to maintain and further cultivate its brand image across the markets in which it operates. There is no assurance that Toyota will be able to develop sales techniques and distribution networks that effectively adapt to customer preferences

or changes in the regulatory environment in the major markets in which it operates. Nor is there assurance that Toyota will be able to cultivate and protect its brand image. Toyota's inability to maintain well developed sales techniques and distribution networks or brand image may result in decreased sales and market share and may adversely affect its financial conditions and results of operations.

The worldwide financial services industry is highly competitive.

The worldwide financial services industry is highly competitive. The market for automobile financing has grown as more consumers are financing their purchases, primarily in North America and Europe. Increased competition in automobile financing may lead to decreased margins. A decline in Toyota's vehicle unit sales, an increase in residual value risk due to lower used vehicle price and increased funding costs are factors which may impact Toyota's financial services operations. A negative impact on Toyota's financial services operations may adversely affect its financial conditions and results of operations.

Political, Regulatory and Economic Risks

Toyota's operations are subject to currency and interest rate fluctuations.

Toyota is sensitive to fluctuations in foreign currency exchange rates and is principally exposed to fluctuations in the value of the Japanese yen, the U.S. dollar and the euro and, to a lesser extent, the Australian dollar and the British pound. Toyota's consolidated financial statements, which are presented in Japanese yen, are affected by foreign currency exchange fluctuations through both translation risk and transaction risk. Changes in foreign currency exchange rates may affect Toyota's pricing of products sold and materials purchased in foreign currencies. In particular, a strengthening of the Japanese yen against the U.S. dollar can have a material adverse effect on Toyota's operating results.

Toyota believes that its use of certain derivative financial instruments and increased localized production of its products have reduced, but not eliminated, the effects of interest rate and foreign currency exchange rate fluctuations, which in some years can be significant. Nonetheless, a negative impact resulting from fluctuations in foreign currency exchange rates and changes in interest rates may adversely affect Toyota's financial conditions and results of operations. For a further discussion of

currency and interest rate fluctuations and the use of derivative financial instruments, please see "Management's Discussion and Analysis of Financial Condition and Results of Operations—Overview—Currency Fluctuations (page 64)" and "Quantitative and Qualitative Disclosures about Market Risk (page 84)," and notes 20 and 21 (page 117) to Toyota's consolidated financial statements.

The automotive industry is subject to various governmental regulations and legal proceedings.

The worldwide automotive industry is subject to various governmental laws and regulations including those related to vehicle safety and environmental matters such as emission levels, fuel economy, noise and pollution. Many governments also regulate local content, impose tariffs and other trade barriers, taxes and levies, and enact price or exchange controls. Toyota has incurred, and expects to incur in the future, significant costs in complying with these regulations. New legislation or changes in existing legislation may also subject Toyota to additional expense in the future. Toyota is also subject to a number of pending legal proceedings. A negative outcome in one or more of these pending legal proceedings could adversely affect Toyota's future financial conditions and results of operations.

Toyota may be adversely affected by political instabilities, fuel shortages or interruptions in transportation systems, natural calamities, wars, terrorism and labor strikes.

Toyota is subject to various risks associated with conducting business worldwide. These risks include political and economic instability, natural calamities, fuel shortages, interruption in transportation systems, wars, terrorisms, labor strikes and work stoppages. The occurrence of any of these events in the major markets in which Toyota purchases materials, components and supplies for the manufacture of its products, or in which its products are produced, distributed or sold, may result in disruptions and delays in the operations of Toyota's business. Significant or prolonged disruptions and delays in Toyota's business operations may result to adversely affect Toyota's financial conditions and results of operations.
